

HAFFMANS ICC INPACK 2000 CO₂ CALCULATOR

PRODUCT LEAFLET

GENERAL PRODUCT INFORMATION

In the beer and beverage industries, the content of dissolved carbon dioxide (CO₂) is a determining factor in the quality and taste of beer and carbonated beverages. Because of this, breweries as well as soft drink manufacturers continuously control and measure the CO₂ quantity of bottled and canned beverages.

The user-friendly, battery powered Inpack 2000 CO₂ Calculator, type ICC, allows for a fast and reproducible determination of the CO₂ content based on Henry's Law.

Equilibrium is created by shaking the container manually before or after the sample is pierced, followed by the measurement of pressure and temperature. The dissolved CO₂ content is then electronically calculated and displayed. The measurement results can be exported to a PC.

BENEFITS

- Cost saving
 - lower investment costs (one device for all common container types)
 - low maintenance

APPLICATIONS

- Laboratory operation with cans and bottles of different types and sizes
- In combination with Pentair Haffmans Inpack 2000 Air Meter determination of air content possible
