

Continuous Gas Analyzers, extractive SIPROCESS GA700

Basic device

1

Overview

The entire SIPROCESS GA700 device is configured in a modular fashion and consists of a basic unit and at least one – maximum two – analyzer modules. It can optionally be fitted with up to two interfaces modules (option modules).

Benefits

The basic unit provides:

- Transmission and evaluation of measurement results
- Display and transmission of device parameters
- Operation (parameterization, configuration)

In addition to the analyzer modules, the basic unit contains the interfaces for the peripherals.

Application

Application areas

Depending on the analyzer modules installed, the device is predominantly used in the following sectors:

- Chemical industry
- Petrochemicals
- Steel
- Cement
- Power generation
- Environmental protection

Design

19" rack unit

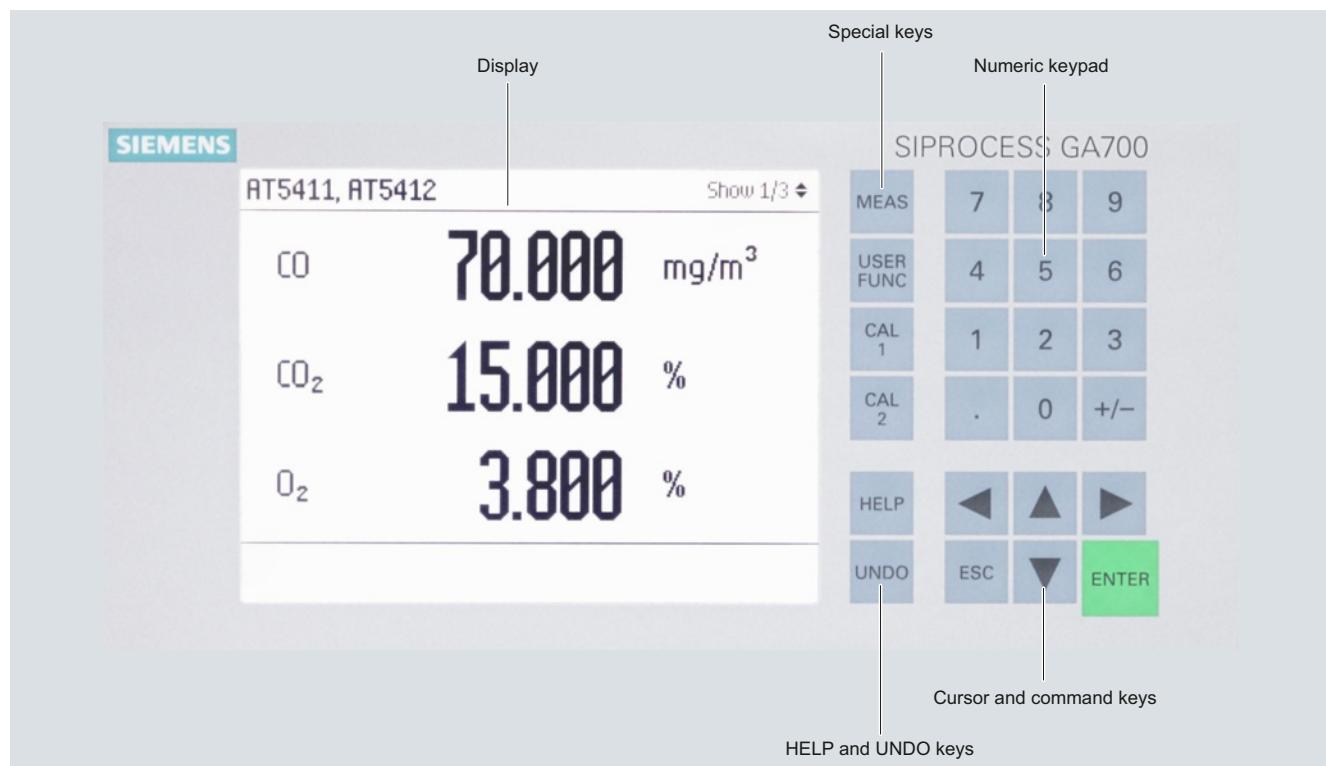

- 19" rack unit with 3 height units (HU) for installation
 - in hinged frames
 - in cabinets with or without telescopic rails
- Gas connections for sample gas inlet and outlet: for pipe diameter 6 mm or 1/4"
- Purging gas connections 10 mm and 3/8" (optional)

Wall-mounted device

- Gas connections for sample gas inlet and outlet: Pipe union for pipe diameter 6 mm or 1/4" (directly on the analyzer modules)
- Purging gas connections (optional), purging gas connection for 6 mm or 1/4" hose (optional)

Display and operator panel

- LCD panel for simultaneous display of:
 - Measured value
 - Status line
 - Measuring ranges
- Menu-driven operation for parameterization, test functions, adjustment
- Operator support in plain text
- Operating software (11 languages)

Display and operator panel of the SIPROCESS GA700 devices

Continuous Gas Analyzers, extractive

SIPROCESS GA700

1

Basic device

Inputs and outputs

- 8 digital inputs, designed for 24 V, potential-free, freely configurable (e.g. for measurement range switchover, processing of external signals from sample preparation)
- 8 relay outputs, with changeover contacts, freely configurable (e.g. for faults, maintenance requests, limit alarms, external solenoid valves)
- Ethernet connection contained in the basic unit (connection on the rear side, Ethernet RJ 45, 100 MBit)
- Service interface (front side); Ethernet RJ 45, 100 MBit.

Interface modules

- Option module 2.1:
one analog output per measured component (max. 6, 0 to 20 mA, 4 to 20 mA or parameter assignment in accordance with NAMUR), plus 6 digital outputs

Function

Essential characteristics

- Measuring range identification
- Storage of measured values possible during adjustments
- Four freely parameterizable measuring ranges, also with suppressed zero point
- Autoranging possible; remote switching is also possible
- Wide range of selectable time constants (static/dynamic noise suppression); i.e. the response time of the analyzer can be matched to the respective measuring task
- Measuring point switchover for up to 12 measuring points (programmable)
- Parameterizable measuring point identification
- Automatic, parameterizable measuring range calibration
- Operation based on the NAMUR recommendation
- Three control levels with their own authorization codes for the prevention of accidental and unauthorized operator interventions
- Simple handling using a numerical membrane keyboard and operator prompting
- Customer-specific analyzer options such as:
 - Customer acceptance
 - TAG labels

Technical specifications

19" rack unit

General information

| | |
|--------------------|--|
| Operating position | Horizontal |
| Conformity | CE mark in accordance with EN 50081-1 and EN 50082-2 |

Design, enclosure

| | |
|-----------------------|----------------------------|
| Weight without module | 8.6 kg |
| Degree of protection | IP20 according to EN 60529 |

Electrical characteristics

| | |
|---|--|
| Power supply | 100 to 240 V AC (nominal range of use 85 to 264 V), 50 to 60 Hz (nominal range of use 47 to 63 Hz) |
| Power consumption | 280 VA max. |
| EMC interference immunity (electromagnetic compatibility) | In accordance with the standard requirements of NAMUR NE21 (05/2006) and EN 61326-1 (01/2008) |
| Electrical safety | In accordance with EN 61010-1, overvoltage category II |

Electrical inputs and outputs

| | |
|---------------------------|---|
| Relay outputs | 8, with changeover contacts, can be freely parameterized, e.g. for measuring range identification; max. load: 24 V AC/DC/40 W (total load for all 8 relay outputs in continuous operation max. 160 W), potential-free, non-sparking |
| Digital inputs | 8, designed for 24 V, potential-free, can be freely parameterized, e.g. for measurement range switchover |
| Analog output | 0/4 ... 20 mA, potential-free |
| Ethernet interface (rear) | Ethernet RJ 45, 100 MBit |
| Service interface (front) | Ethernet RJ 45, 100 MBit |
| Option module 2.1 | 6 analog outputs, 0/4 to 20 mA, potential-free; maximum load 750 Ω and 6 additional relay outputs, loading capacity: 24 V AC/DC/40 W, potential-free, non-sparking |

Climatic conditions

| | |
|---|--|
| Permissible operating altitude | 3 000 m above sea level |
| Permissible ambient temperature (with one module; application-dependent with two modules) | <ul style="list-style-type: none"> • -30 ... +70 °C during storage and transportation • 0 ... 50 °C during operation with one or two OXYMAT 7 analyzer modules <p>Ventilation slits must not be covered (recommended minimum upward clearance from the next device when installing 2 analyzer modules and at maximum ambient temperature: min. 1 HU)</p> |
| Permissible humidity | < 90 % RH (RH: relative humidity), during storage and transportation (dew point must not be undershot) |

Wall housing

General information

| | |
|--------------------|--|
| Operating position | Vertical |
| Conformity | CE mark in accordance with EN 50081-1 and EN 50082-2 |

Design, enclosure

| | |
|-----------------------|--|
| Weight without module | 23 kg |
| Degree of protection | IP65 in accordance with EN 60529, restricted breathing enclosure to EN 50021 |

Electrical characteristics

| | |
|---|--|
| Power supply | 100 to 240 V AC (nominal range of use 85 to 264 V), 50 to 60 Hz (nominal range of use 47 to 63 Hz) |
| Power consumption | 280 VA max. |
| EMC interference immunity (electromagnetic compatibility) | In accordance with the standard requirements of NAMUR NE21 (05/2006) and EN 61326-1 (01/2008) |
| Electrical safety | In accordance with EN 61010-1, overvoltage category II |

Gas inlet conditions

| | |
|----------------------|--------------------------------------|
| Purging gas pressure | < 100 hPa above atmospheric pressure |
| • Permanent | 165 hPa above atmospheric pressure |

Electrical inputs and outputs

| | |
|-----------------------------|---|
| Relay outputs | 8, with changeover contacts, can be freely parameterized, e.g. for measuring range identification; max. load: 24 V AC/DC/40 W (total load for all 8 relay outputs in continuous operation max. 160 W), potential-free, non-sparking |
| Digital inputs | 8, designed for 24 V, potential-free, can be freely parameterized, e.g. for measurement range switchover |
| Analog output | 0/4 ... 20 mA, potential-free |
| Ethernet interface (bottom) | Ethernet RJ 45, 100 MBit |
| Service interface (bottom) | Ethernet RJ 45, 100 MBit |
| Option module 2.1 | 6 analog outputs, 0/4 to 20 mA, potential-free; maximum load 750 Ω and 6 additional relay outputs, loading capacity: 24 V AC/DC/40 W, potential-free, non-sparking |

Analyzer module OXYMAT 7

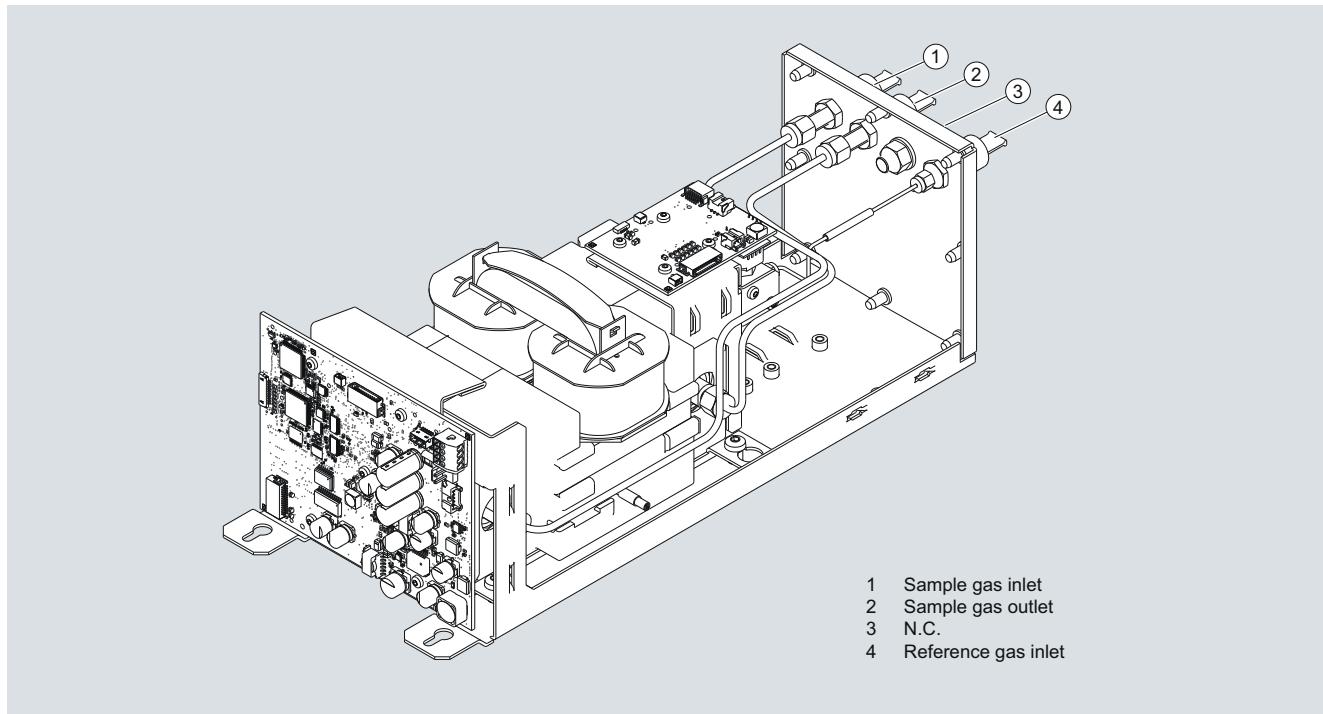

Overview

The function of the OXYMAT 7 analyzer module is based on the paramagnetic alternating pressure method and is used to measure oxygen in gases.

Benefits

- Paramagnetic alternating pressure principle
 - Small measuring ranges (0 to 0.5 % or 99.5 to 100 % O₂)
 - Absolute linearity
- Detector element has no contact with the sample gas
 - Applicable in the absence of corrosive sample gases
 - Long service life
- Physically suppressed zero point possible, e.g. in the measuring range 98 % or 99.5 % to 100 % O₂

Design

Structure of high-pressure version, sample gas path with pipes

Designs – Parts wetted by sample gas, standard

| Gas path | Material | |
|------------|----------------|----------------------------------|
| With hoses | Bushing | PVDF |
| | Hose | FKM (e.g. Viton) |
| | Sample chamber | Stainless steel, mat. no. 1.4571 |
| | O-rings/seals | FPM |
| | Restrictor | PTFE (e.g. Teflon) |

| Gas path | Material | |
|----------------------|-----------------------|--------------------------------------|
| With pipes | Bushing | Stainless steel, mat. no. 1.4571 |
| | Pipe | Stainless steel, mat. no. 1.4571 |
| | Sample chamber | Stainless steel, mat. no. 1.4571 |
| | Sample gas restrictor | Stainless steel, mat. no. 1.4571 |
| | O-rings/seals | FKM (Viton) or FFKM (Kalrez) |
| Special applications | | Materials adapted to the application |

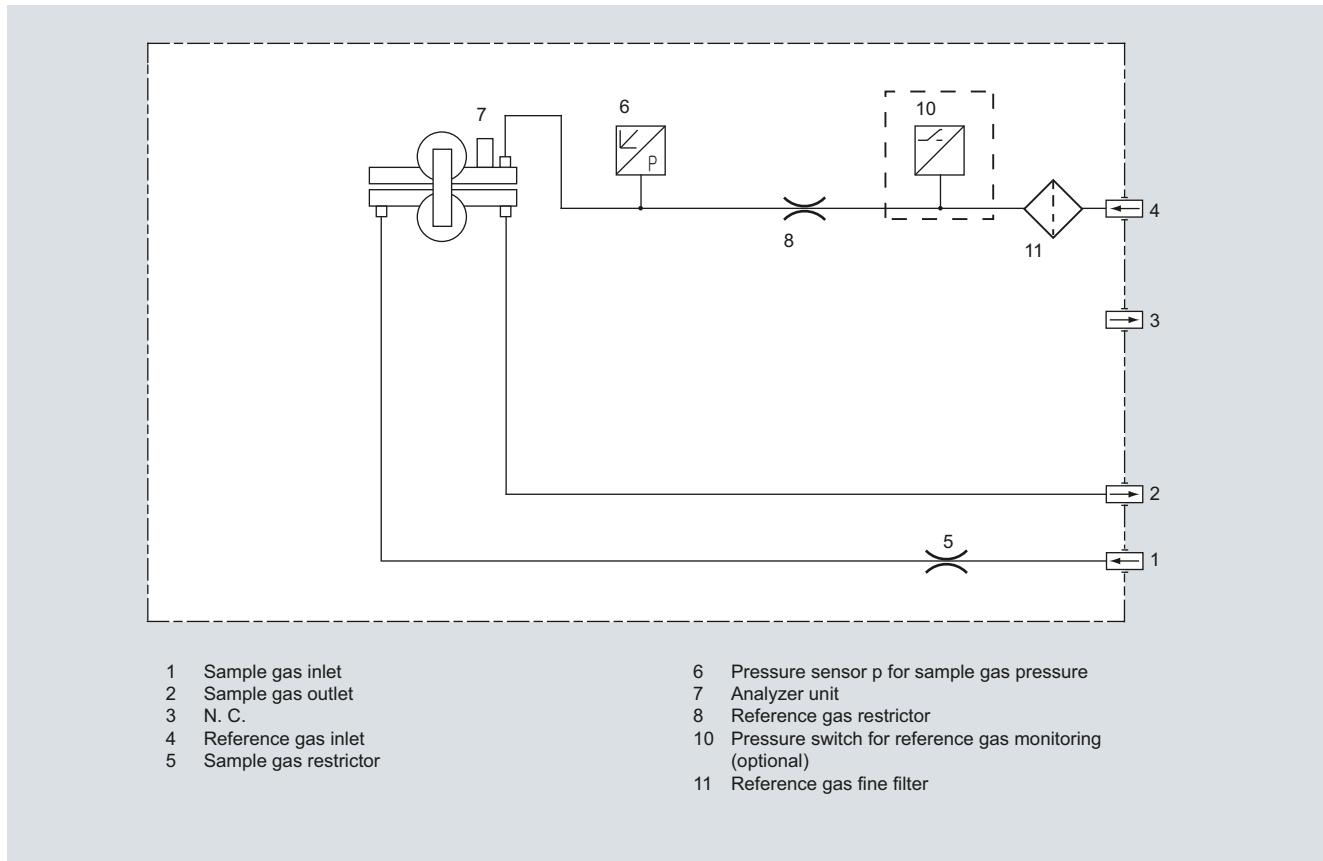

Options

| Pressure switch | Diaphragm | FKM (Viton) |
|-----------------|-----------|-------------|
| | Enclosure | PA 6.3 T |

Gas path

High-pressure version with optional pressure switch for monitoring reference gas pressure

| | |
|------------------------|---|
| Reference gas pressure | 2 000 ... 4 000 hPa above sample gas pressure, but max. 5 000 hPa |
| Sample gas pressure | |
| • With hoses | Max. 1 500 hPa above atmospheric pressure |
| • With pipes | Max. 2 500 hPa above atmospheric pressure |
| Sample gas path | With hoses or with pipes |

| 5 | Sample gas restrictor | 10 | Damping restrictor |

Gas path plan, low-pressure with external reference gas pump, with hoses

Mode of operation

Oxygen is highly paramagnetic. This outstanding property of paramagnetism is used as a physical measuring effect for oxygen analysis.

Oxygen molecules in an inhomogeneous magnetic field always move toward the higher field strength. This results in a higher oxygen concentration where the field strength is higher (higher oxygen partial pressure). If two gases with differing oxygen content are combined in a magnetic field, a (O_2 partial) pressure difference arises between them.

Since the measuring effect is always based on the difference of the oxygen content of the two gases, one refers to the sample and reference gases.

For measuring oxygen in the OXYMAT 7, the reference gas (N_2 , O_2 or air) flows through two channels into the sample chamber (6). One of these partial flows enters the measuring chamber (7) in the area of the magnetic field. If the sample gas is O_2 -free, the reference gas can flow out freely. If the sample gas does contain O_2 , however, the oxygen molecules concentrate in the area of the magnetic field. The reference gas can then no longer flow off freely. An alternating pressure results between the two reference gas inlets. This pulsates in step with the magnetic field and depends on the oxygen concentration. This causes an alternating flow in the microflow sensor (4).

The microflow sensor consists of two nickel-plated grids heated to approximately 120°C, which, along with two supplementary resistors, form a Wheatstone bridge. The alternating flow results in a change in the resistance of the nickel-plated grids. The resulting offset in the bridge is a measure of the concentration of oxygen in the sample gas.

Because the microflow sensor is located in the reference gas flow, the measurement is not influenced by the thermal conductivity, the specific heat or the internal friction of the sample gas. Additionally, the microflow sensor is protected through this arrangement from corrosion caused by the sample gas.

Further information

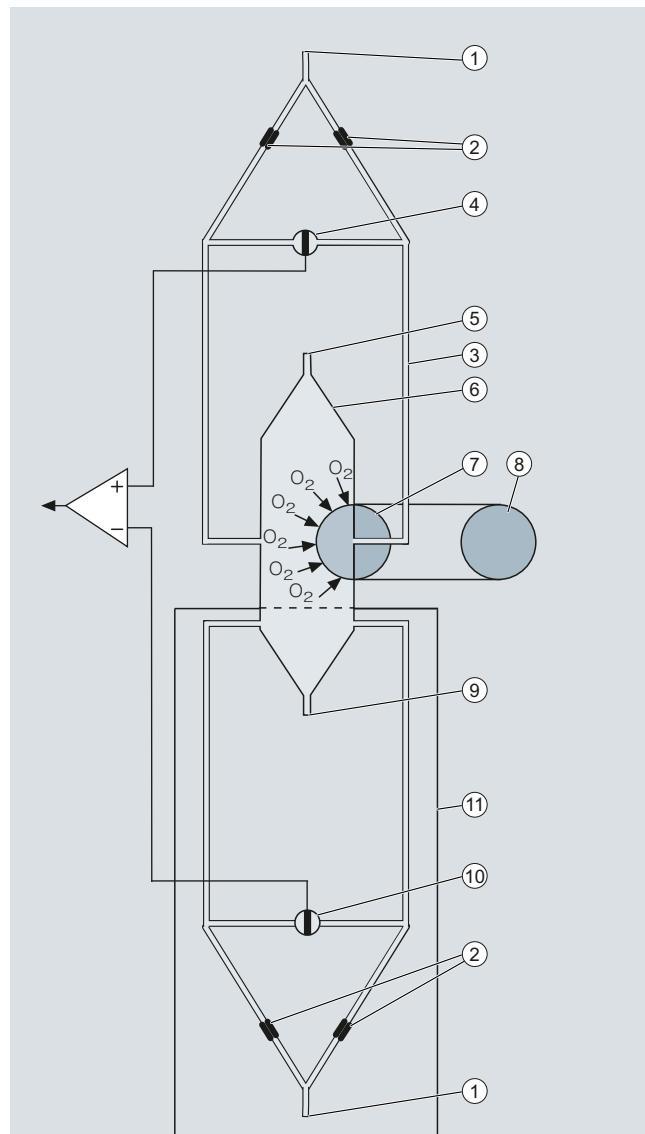

The oscillating magnetic field (8) means that the basic flow at the microflow sensor is not detected. The measurement is, thus, independent of the module's operating position or the position of the sample chamber.

The sample chamber is directly in the sample path and has a small volume, and the microflow sensor is a low-lag sensor. As a result, extremely short response times are realized.

Vibrations at the installation site can interfere with the measured signal (e.g. large fluctuations in the output signal). This behavior can be compensated for by a second (optional) microflow sensor (10), which functions as a vibration sensor. Since large differences in density between the sample and reference gases further amplify the undesired influence of vibration, reference gas is channeled to both the compensation microflow sensor (10) and the sample microflow sensor (4).

The sample gases must be fed into the analyzers free of dust. Condensation in the sample chambers must be prevented. Therefore, the use of gas modified for the measuring task is necessary in most application cases.

Flowing reference gas prevents the microflow sensor from being damaged and maintains the measurement capability of the analysis module.

- 1 Reference gas inlet
- 2 Restrictors
- 3 Reference gas channels
- 4 Microflow sensor for measured signal
- 5 Sample gas inlet
- 6 Sample chamber
- 7 Source of the paramagnetic measuring effect
- 8 Electromagnet with alternating current strength
- 9 Sample gas and reference gas outlet
- 10 Microflow sensor in the vibration compensation system (order variant)
- 11 Compensation circuit (optional)

OXYMAT 7, principle of operation

Continuous Gas Analyzers, extractive

SIPROCESS GA700

1

Analyzer module OXYMAT 7

Essential characteristics

Technical features

Depending on the reference gas, the physical zero point can be set between 0 % and 100 % oxygen.

- Smallest measuring spans (up to 0.5 % O₂) possible
- Measuring ranges with physically suppressed zero points possible (e.g. 99.5 % to 100 %)
- Short response time
- Low long-term drift
- Also suitable for use with highly corrosive sample gases (material 1.4571 or Hastelloy C22)
- Monitoring of reference gas pressure with reference gas connection 3 000 to 5 000 hPa (abs.) (option)

Features

- Electrically isolated measured value output 0/4 to 20 mA (also inverted)
- Internal pressure sensor for correction of pressure variations in sample gas in the range from 500 to 2 500 hPa (absolute)
- External pressure sensor - only with piping as the gas path - can be connected for correction of variations in the sample gas pressure up to 3 000 hPa absolute (option)
- Monitoring of reference gas (option)
- Analysis part with flow-type compensation circuit as an order variant for reducing the vibration impact at the installation site
- For sample gas path with hoses: Connection cable to the pressure sensor with hoses
- Hardware adapted to application
- Customer-specific analyzer options such as:
 - Drift recording
 - Clean for O₂ service
 - Kalrez gaskets
- Sample chamber for use in presence of highly corrosive sample gases

Reference gases

| Measuring range | Recommended reference gas | Reference gas connection pressure | Comments |
|---|---------------------------|--|---|
| 0 to ... vol.% O ₂ | N ₂ | 2 000 ... 4 000 hPa above sample gas pressure (max. 5 000 hPa absolute) | The reference gas flow is set automatically to 5 ... 10 ml/min (up to 20 ml/min with flow-type compensation branch) |
| ... to 100 vol.% O ₂ (suppressed zero with full-scale value 100 vol.% O ₂) | O ₂ | | |
| Around 21 vol.% O ₂ (suppressed zero point with 21 vol.% O ₂ within the measuring span) | Air | 100 hPa with respect to sample gas pressure, which may vary by max. 50 hPa around the atmospheric pressure | |

Table 2: Zero point error due to diamagnetism or paramagnetism of some carrier gases with nitrogen as the reference gas at 60°C and 1 000 hPa absolute (according to IEC 1207/3)

Conversion to other temperatures:

The deviations from the zero point listed in Table 2 must be multiplied by a correction factor (k):

- with diamagnetic gases: $k = 333 \text{ K} / (\varphi [\text{ }^\circ\text{C}] + 273 \text{ K})$
- with paramagnetic gases: $k = [333 \text{ K} / (\varphi [\text{ }^\circ\text{C}] + 273 \text{ K})]^2$

(All diamagnetic gases have a negative deviation from zero point).

Technical specifications

The technical specifications are based on the definitions of DIN EN 61207-1.

Unless specified otherwise, the data listed below relates to the following measurement conditions:

| | |
|----------------------|---------------------------------|
| Ambient temperature | 25 °C |
| Atmospheric pressure | Atmospheric (approx. 1 000 hPa) |
| Sample gas flow | 0.6 l/min (or NL/min) |
| Reference gas | Nitrogen |
| Site of installation | Vibration- and impact-free |

General information

| | |
|--------|-----------------------------------|
| Weight | Approx. 5.5 kg (standard version) |
|--------|-----------------------------------|

Measuring ranges

| | |
|--|---|
| Number of measuring ranges | Max. 4; parameters can be assigned freely |
| Parameters can be assigned in the measuring ranges | |
| • Smallest possible measuring spans | 0.5 % ($\geq 1\%$ for high-temperature model), 2 % or 5 % O ₂ |
| • Largest possible measuring spans | 100 % O ₂ |

Gas inlet conditions

| | |
|--|---|
| Sample gas pressure | 500 ... 1 500 hPa (abs.) |
| • Devices with tubes | 500 to 3 000 hPa (abs.); short-term max. 5 000 hPa (abs.) |
| • Devices with pipes | 500 to 2 500 hPa (abs.); short-term max. 5 000 hPa (abs.) |
| - Without vibration compensation | |
| - With vibration compensation | |
| Correction of the internal pressure sensor | |
| • Devices with tubes | 500 ... 1 450 hPa (abs.) |
| • Devices with pipes | 500 ... 2 450 hPa (abs.) |
| Reference gas pressure | |
| • High-pressure connection | 0.2 to 0.4 MPa above the sample gas pressure, but a maximum of 0.5 MPa (absolute) |
| - Without vibration compensation | 2 000 ... 3 500 hPa above sample gas pressure; max. 5 000 hPa (abs.) |
| - With vibration compensation | 2 500 ... 4 000 hPa above sample gas pressure; max. 5 000 hPa (abs.) |
| • Low-pressure connection with external reference gas pump (only for sample gas pressure 500 ... 1 500 hPa (absolute)) | 100 hPa above the sample gas pressure |
| Pressure loss between sample gas inlet and sample gas outlet | < 100 hPa at 1 l/min |
| Sample gas flow | 18 ... 60 l/h (0.3 ... 1 l/min) |
| Sample gas temperature | 0 ... 60 °C |
| Sample gas humidity (rel. humidity) | < 90 % (condensation inside the gas path is to be avoided) |

Sample chamber temperature

| | |
|------------------|---------------|
| Standard version | Approx. 72 °C |
|------------------|---------------|

Time response

| | |
|---|--|
| Warm-up period at room temperature | < 2 h |
| Dead time (T10) | < 0.5 s |
| Signal rise time or fall time for a flow rate of 1 l/min, a static attenuation constant and a dynamic attenuation constant of 0 s | < 1 s |
| Time for device-internal signal processing | approx. 1 s |
| Delayed display T90 | T90 < T10 + rise or fall time + signal processing time |

Measuring response

| | |
|---|---|
| Output signal fluctuation | ≤ 0.5 % of the current measuring span (6 σ value) for a static attenuation constant of 0 s and a dynamic attenuation setting of 5 % / 10 s (with activated vibration compensation: 1.5 times the value) |
| Detection limit | ≤ 1 % of smallest measuring span according to nameplate (with vibration compensation activated: 1.5 times the value) |
| Measured-value drift | ≤ 0.5 %/month of current measuring span or ≤ 50 vpm oxygen, whichever is larger |
| Repeatability | ≤ 0.5 % of current measuring span |
| Linearity error with ambient air as reference gas | ≤ 0.1 % |

Influencing variables

| | |
|---|--|
| Ambient temperature | ≤ 0.5 % of smallest measuring span according to nameplate/10 K or ≤ 50 vpm O ₂ /10 K, whichever is larger |
| • At the zero point | |
| • At span | ≤ 0.5 % of the current measuring span/10 K or ≤ 50 vpm O ₂ /10 K, whichever is larger |
| Sample gas pressure | Deviation approx. 2 % of current measuring span/1 % pressure variation |
| • Without pressure compensation | ≤ 0.2 % of the current measuring span/1 % pressure variation or ≤ 50 vpm O ₂ /1 % pressure variation, whichever is larger |
| • With pressure compensation switched on | |
| Sample gas flow | ≤ 1 % of the current measuring span with a flow rate change of 0.1 l/min within the permissible flow range (0.3 ... 1 l/min) |
| Carrier gases | Zero point deviation (cross-sensitivity) in accordance with Table A.1 of EN 61207-3 |
| Supply voltage (fluctuations of the supply voltage of the basic unit*) in the range of 90 to 253 V AC/47 to 63 Hz | ≤ 0.1 % of full-scale value of characteristic |

Electrical inputs and outputs

Analog and digital interfaces See basic unit

Gas connections

| | |
|------------|---|
| With hoses | Plastic screw connection for plastic pipe or tube 4 mm/6 mm |
| With pipes | Connection for threaded joint; ISO female thread 1/8" |

Climatic conditions

| | |
|---|--|
| Storage and transport | -30 ... 70 °C |
| Permissible ambient temperature (for operation in basic unit) | 0 ... 50 °C |
| Relative humidity (RH) during storage, transport or operation | < 90 % (condensation from the installed components is to be avoided) |

Materials of wetted parts

| | |
|------------------|---|
| Sample chamber | Stainless steel: • Plates: Mat. No. 1.4571 (X6CrNiMoTi 17-12-2) • Screw-in glands: Mat. No. 1.4404 (X2CrNiMo17-12-2) Hastelloy C22: • Plates: Mat. No. 2.4602 (NiCr21Mo14W) • Screw-in glands: Mat. No. 2.4819 (NiMo16Cr15W) |
| Gas path | FPM (e.g. Viton), connections PVDF |
| • With hoses | |
| • With pipes | Stainless steel: • Pipes: Mat. No. 1.4571 (X6CrNiMoTi 17-12-2) • Gas connections: Mat. No. 1.4404 (X2CrNiMo 17-12-2) Hastelloy C22: • Pipes: Mat. No. 2.4602 (NiCr21Mo14W) • Gas connections: Mat. No. 2.4819 (NiMo16Cr15W) |
| Sealing material | FPM (e.g. Viton) or FFKM Compound 2035 (e.g. Kalrez 2035 (see device certificate)) |

Special applications

Schematics

Gas connections

Version with pipes

The gas connections are equipped with screw-in glands (ISO female thread 1/8"). This ensures that threaded joints can be used for pipes with a diameter of 1/4" and also with a diameter of 6 mm.

The external gas lines are screwed on to the sample gas inlet (1), sample gas outlet (2) and reference gas inlet.

Version with hoses

The gas connections consist of PVDF. Tubes made of FPM (e.g. Viton) or of PTFE (Teflon) with an inner diameter of 4 mm and wall thickness of 1 mm can be connected to the gas connections. The tubes are fastened with the screw cap of the PVDF screwed gland.

The reference gas connection is a screw connection as with the piped version (see above).
